**TORONTO, ON, Jan. 8 2004.** Sangoma Technologies Corporation, which is a leading provider of connectivity hardware and software products for Wide Area Networks and Internet infrastructure, has provided George Brown College of Toronto with one of its WAN product in order to enhance the school's networking curriculum offerings.

**MONTREAL, QC, Jan. 23, 2004.** Isascoft and the Ecole nationale de Police have entered into a partnership agreement. In fact, Isascoft will provide development tools such as a training management platform, while the Ecole nationale de police du Québec will offer its expertise in matters regarding patrolling, traffic safety, use of force and investigation.

**SAULT STE. MARIE, ON, Feb. 4, 2004.** Amperion, Inc., which provides broadband over power line technology, and PUC Telecom, provider of telecommunications services have announced that a broad-band over power line solution has been deployed in Sault Ste. Marie, Ontario.

**TORONTO, ON, Jan. 27, 2004.** Tri-Vision Technologies, has announced that it has entered into a licensing agreement with USA Video Interactive Corporation to market and distribute USVO technologies. One of the USVO technologies is related to video content protection using water-marking. Watermarking is used to protect a content by inserting information which is not detectable by a user.

**CALGARY, Jan. 14, 2004.** M-Tech Information Technology has announced that Cessna Aircraft Company has purchased one of its

product which is a pass word management solution. Such solution is used to reduce help desk support and administration costs, to further increase user productivity and enhance corporate security. Cessna Aircraft was looking for a management solution to reduce the over 44,000 password reset calls per year.

**MONTREAL, Jan. 6, 2004.** NSTEIN Technologies, which provides software solutions for managing and retrieving unstructured information, has announced that it has signed an agreement with Health Canada to spear-head a new Global Public Health Intelligence Network platform for monitoring potential public health risks and threats around the world. The network is an initiative developed by Health Canada in collaboration with the World Health Organization to monitor, aggregate and disseminate health information to the international public health community in order to provide an early warning of potential public health risks or threats.

**EDMONTON, Dec. 2, 2003.** Intuit Canada has licensed CodeBaby's 3D virtual agent technology. Under the agreement Intuit will introduce its customers to "Laura", a customized, interactive, CodeBaby virtual agent who will assist the users in completing their tax returns online. Laura will deliver, *inter alia*, tax tips, advice, etc.

**OTTAWA, ON, Nov. 19, 2003.** Raytheon Canada has been awarded a Preferred Supplier Award by NAV CANADA. Raytheon Canada is being recognized for its achievements on the Canadian Automated Air Traffic System (CAATS) and Northern Radar Programs.

**VANCOUVER, BC, Nov. 18, 2003.** Partners for the Advancement of Collaborative Engineering Education have announced a contribution with a commercial value of approximately \$240 million to the

University of British Columbia (UBC) today. This contribution, the largest in UBC's history, consists of computer-aided design, manufacturing, and engineering software, hardware, and training. The PACE is a corporate alliance between various large corporations.

**LONGUEUIL, QC, Feb. 26, 2004.** D-BOX was presented with the "2004 Titans Award" for its motion simulator system, which was recognized as the year's best Canadian technological innovation during the "Celebration of Science" gala event, held by the Foundation of the Montréal Science Centre. The motion simulator system adds a new dimension, movement, to home theatre viewing and video games.

**TORONTO, ON, Feb. 23, 2004.** The Canadian Air Transport Security Authority has chosen ACME-Future Security Controls to develop a comprehensive solution for the operational trials of CATSA's restricted area identification card project to improve security at Canadian airports. Biometric technologies will be used in order to create a secure credential card for individuals accessing restricted areas of airports. A central database will further be used to verify the validity of any card issued in Canada.

**OTTAWA, ON, Jan. 15, 2004.** The Canadian Department of Justice has signed with CGI Group a five-year IT outsourcing contract valued at CDN\$14.5 million. CGI will provide the Department employees with a national service desk along with onsite support services, systems and network management and equipment maintenance in the National Capital Region.
